

Quality - Certificats

This range of kitchen furniture has been submitted to safety inspections by LGA QualiTest GmbH's testing and certification centre, and the GS test mark confirms that the furniture meets all requirements for safety, load-bearing, material consistency and ease of use. The GS mark also confirms that we are regularly subjected to third-party monitoring, which ensures that the requirements for new products and developments are also met without fail.

Note: The GS sign applies exclusively to the listed kitchen furniture and worktops. For items in the category of merchandise (appliances, sinks, accessories, home living furniture etc.) we require the manufacturers to provide confirmation that they fulfil all relevant standards and guidelines. Our fitted kitchens meet the standard of quality DIN EN 14749.

We run a modern quality, environmental and energy management system. (DIN EN ISO 9001, DIN EN ISO 14001, DIN EN ISO 50001)

The LGA Intercert GmbH certificated that our company operates on a process-oriented quality management system which is used in all areas, from product development up to production and fitting and aftersales-service.

As an industrial company we take our share of responsibility for the conservation of nature and are obligated to a constant improvement of the environmental achievement. Therefore we have introduced an environment management system according to DIN EN ISO 14001 and have this certified by the certification centre LGA Intercert GmbH (TÜV Rheinland). The use of low-emission water-based lacquer contributes significantly to the reduction of emission. For the waste disposal we focus on recyclable materials and ensure that all documented packaging are material processed and that the regulations on packaging are fulfilled.

Corporations should be urged to increase the resource efficiency of their activities, especially the forces of the resource energy. Energy management systems become more and more important and provide a possibility to systematically build up the necessary change of the energy consumption of corporations and thereby to fulfill the new and stricter operations of law. Only with an effective energy management system corporations can be supported in their efforts to lower the costs and to raise the efficiency and to withstand in the global competition. The effectivity of the energy management system according to DIN EN ISO 50001 has been certified by the certification centre LGA Intercert GmbH (TÜV Rheinland).

We have successfully accomplished the certification audit according to the guidelines of the PEFC Council. The certificate is available from 1st January 2011.

PUResist
water protection system

PUResist water protection system

We have changed the bonding system of our formed edges of fronts, carcass parts and surround materials and focus on an improved technology, based on a physical / chemical setting of the adhesive.

Quality pros:
higher thermic resistance through physical / chemical setting (e.g. under extreme impact of heat such as container transport)
optimal protection against ingress of moisture.

Recycling certificate:

RKT recycling office transport packaging
Our packaging materials are licensed by the management companies.
Thereby it is guaranteed that packaging is collected by the waste management partners, documented packaging are material processed and that all regulations on packaging are fulfilled.

The observance of their permitted formaldehyde limits of each material and component is part of a high quality standard. The maximum value of the emission class E1 is met, or to be precise, is fallen widely below, by a corresponding choice of raw chipboards and their edging (emission class E1 = 0.1 ppm = parts per million = 0.1 parts of formaldehyde to 1 million part of air). The raw chipboard of carcass units already corresponds to the E1 instruction and, therefore, subjective risks are also excluded.

Every year, the Bundesverband mittelständischer Küchenfachhandel (German Association of Mid-Size Kitchen Retailers), BMK Düsseldorf, awards an innovation prize for special product innovations. In 2007 Häcker Küchen received a prize in the kitchen furniture segment for its "silent-move" product., and in 2010 for the product line "NOVA" and in 2011 for the wall unit "Climber".

We are an authorised member of the marketing association A30 Küchenmeile e.V.
